Equatorial Guinea is situated in the hub of the dynamic offshore West Africa Petroleum Province and is now established as a significant petroleum producing nation. Vigorous exploration during the 1990’s combined with rapid field development has resulted in daily production rising from less than 5,000 bopd in 1992 to a 2014 average of 436,000 boepd.

The Hess Operated Okume Complex, also in the Rio Muni Basin, commenced production in 2008 and the Noble operated Aseng Field, located on the Equatorial Guinea part of the Douala Basin, offshore Bioko Island, discovered in 2006 and which produced first oil on November 6th, 2011.
Equatorial Guinea overlies two world class petroliferous sedimentary basins; highly prospective with proven petroleum systems.

- East of Bioko Island lies the Rio Muni Basin.
- Southern region of Equatorial lies the Douala Basin.
